

VigilManager

Problem: Transit systems, like other service providers, face some kind of risk everyday. Imagine what it would mean for your system if a poorly trained driver with a previous history of driving infringements contributed to a fatal accident.

Solution: Reduce risk and stop accidents before they happen using VigilManager.

VigilManager helps transit systems to improve safety and reduce liability by managing the risks of unsafe driving. VigilManager helps fleets to consistently identify and correct unsafe driving to predict and prevent accidents.

VIGILMANAGER BENEFITS

- Reduces the frequency and severity of losses by effectively managing unsafe driving
- Automated alerts to warn management about unsafe driving events
- Automated driver recommendations and follow-up actions to combat unsafe driving
- Allows management to benchmark drivers and profile driving trends
- Improves the quality and consistency of driver performance evaluations
- Provides instant access to centralized information on driver performance history

VIGILMANAGER

Driver Management Database

VigilManager is an advanced database used to gather and store information on driver performance.

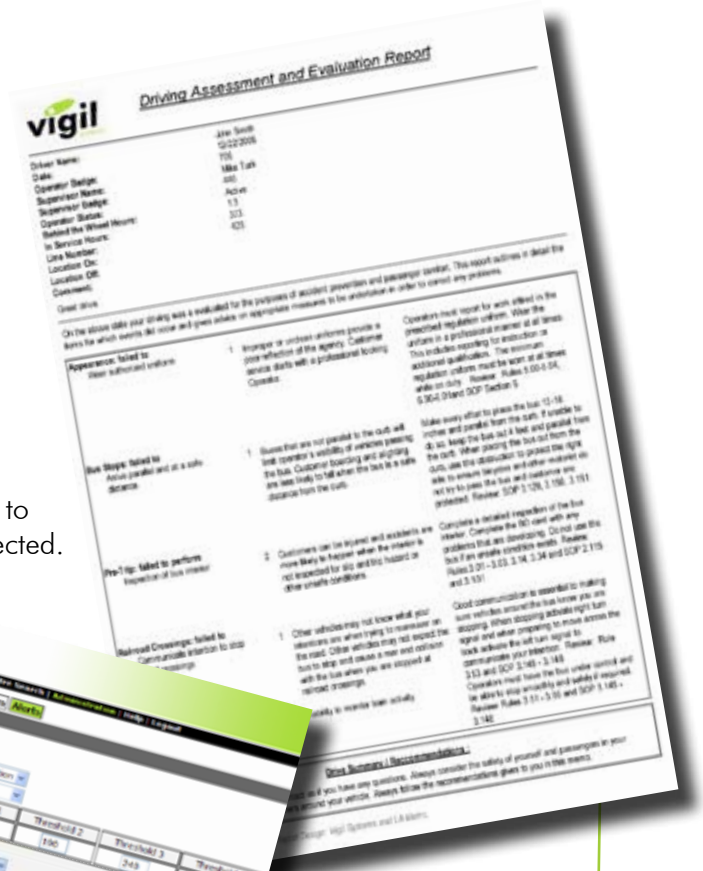

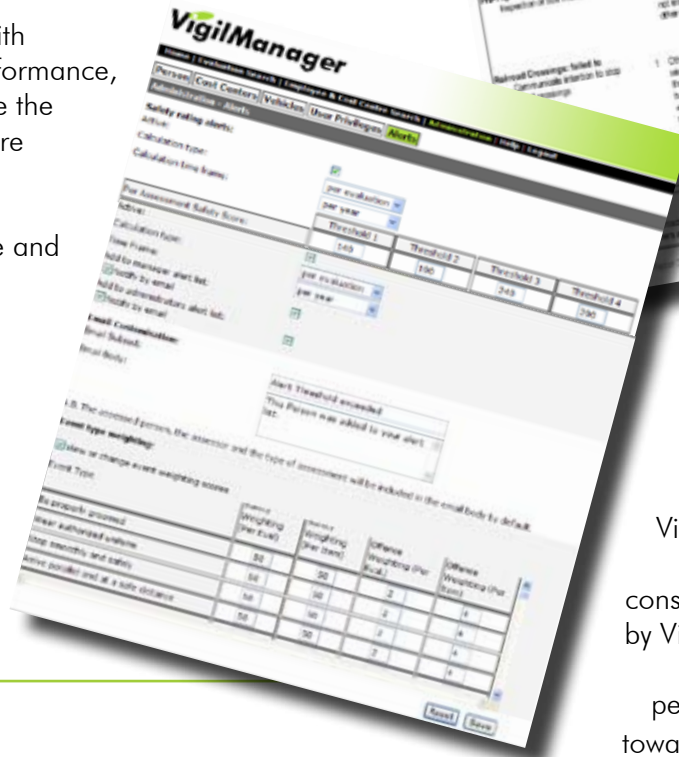

VigilManager mitigates risk by administering information on driver behavior and alerting management to unsafe events throughout a driver's employment.

VigilManager provides a consistent and objective approach to ensuring that risky behaviors are quickly identified and corrected.

By providing management with important data on driver performance, VigilManager helps to reduce the risks and stop accidents before they happen.

VigilManager also saves time and resources through better organisation and distribution of driver data which can be accessed across the organisation.

Alerts can be customised to inform managers when trends in driver behavior appear.

Driving reports can be printed or saved.

VigilManager allows instructors and management to collect consistent, quality data generated by Vigil Systems' driver evaluation tools, and profile a driver's performance and their progress towards competency benchmarks.

VIGILMANAGER FEATURES

VigilManager streamlines the management and distribution of driver performance data, including:

- Standardized creation and distribution of driver evaluation forms and reports (To improve the quality and consistency driver evaluation data organisation wide)
- Links to AVL or ATMS systems to access vehicle information (To identify and report anonymous drivers who were observed committing unsafe acts)
- Links to HR and LMS systems to collate all employee information (Complete employee records including completed training and required training)
- Links to Claims Management Systems / Accident History data (Complete employee records of accidents / claims history)
