

VigilPassenger

Driving Excellence

SAFER, SMOOTHER, GREENER...

- **ON-RIDE CHECKS**
- **OBJECTIVE ASSESSMENTS**
- **MAINTAIN QUALITY DRIVING IN SERVICE**

Problem: Large or small, transit agencies today face the challenges of delivering high safety and service standards within constrained operating budgets.

Solution: Management recognizes that optimising safety, customer service and accident prevention begins with drivers. Ensure safe driving expectations are met by using VigilPassenger as a driver assessment and audit tool.

Designed and developed for the transit industry, VigilPassenger is a portable assessment tool, for supervisors and management to accurately document and provide feedback on driver performance in passenger service. VigilPassenger is a powerful risk management tool, used to improve the quality and consistency of driver evaluations.

VIGILPASSENGER BENEFITS

- Improve the quality and consistency of driver evaluations
- Small, Portable and Discreet device, ideal for check rides
- Document and provide immediate feedback on driver performance
- Improve driver awareness and accountability
- Generate automated reports for timely management review
- Reduce the time spent on driver evaluation and reporting processes

VigilPassenger Hardware

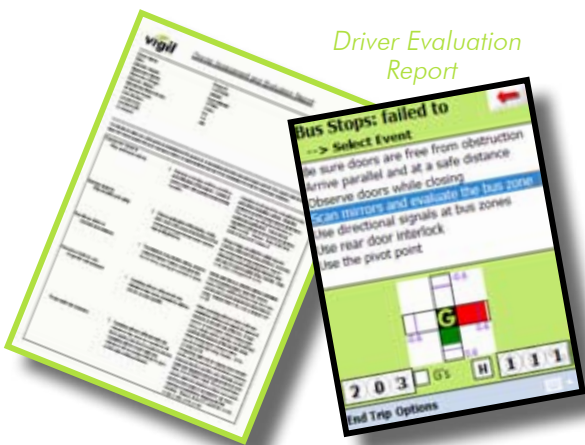

VigilPassenger consists of an ultra portable, handheld Pocket PC and passenger comfort sensor that is easy to operate and set up within minutes. The device is particularly useful for in-service checks to ensure of good driving behavior after training.

VigilPassenger Software

VigilPassenger software produces driver assessment forms and driver evaluation reports that can be customized to your performance standards. VigilPassenger eliminates the need to produce paper assessment forms and spend time writing reports after a driver evaluation is conducted.

Driver assessment forms are easily uploaded to the Pocket PC to be used for multiple driver evaluations. Once an evaluation is completed, an instant report is generated to detail the driver's performance. VigilPassenger creates full featured reports incorporating trip data, observations, trainer comments, safety criteria and standard operating procedures.

Driver Evaluation Report

VigilPassenger Driver Assessment Form

"VigilPassenger is a tool that is used to identify, document and manage unsafe driving before it becomes an accident. It captures important information to show that driving risks are being managed effectively."

Ian Haynes, CEO, Vigil Systems

VigilPassenger uses a passenger comfort sensor to impartially measure the smoothness of operation, providing a real-time display of the forces experienced by passengers during a road trip (ex. braking, acceleration, and cornering). This allows trainers to accurately identify and document erratic driving behavior.

VigilManager Database

Reports can be uploaded onto the VigilManager database to keep a history of the assessments per driver and per trainer. VigilManager allows manager to identify risky drivers and to check on training productivity.

FEATURES OF VIGILPASSENGER

- Provides a graphical, real-time display of driving smoothness (braking, acceleration, cornering)
- Captures the assessor's observations and passenger comfort experienced during a drive
- Data can be captured individually, or combined for a complete trip profile
- Reports are generated instantly and can be printed or distributed electronically
- Assessments can be stored in VigilManager database for further review and analysis
- Easy to use hardware and software, minimal training required
