

Vigil Systems
and Confiance Australia offer a complete
performance training solution for the
mining industry

Vigil Systems develops advanced on-vehicle driver training technology and web-based training and risk management solutions for the mining, transit, emergency services, research and car driver training industries. With customers throughout North America, Asia and Australia, Vigil's international reputation as a high performance training solution is unmatched.

As part of this comprehensive training solution, Confiance Australia can provide education and training on how to enhance operator performance and safety through solution-focused programs that are based on the same principles that make our elite sportspeople so successful. In this positive approach to performance enhancement, trainers and assessors can learn how to coach others to improve their physical and mental state using practical solutions to driving, safety and well-being challenges.

Confiance
AUSTRALIA

Together Vigil Systems and Confiance are now offering this complete training solution for the mining industry. With Vigil's technology and Confiance's knowledgebase and expertise in training and performance management, mines worldwide now have the opportunity to access advanced operator feedback tools that have previously been unavailable. Through the combination of video and statistical feedback gathered in real-time, and the benefits of train-the-trainer support and education materials, your organisation can be part of this innovative approach to enhancing operator performance and safety.
